

Test Blueprint

The below is a test blueprint for a summative examination given to medical students at the end of a Hepatology lecture series. The test would comprise of 25 multiple choice and 6 short-answer questions.

Three domains from Bloom's taxonomy will be incorporated – namely, knowledge, comprehension, and application.

Key content topics and learning objectives:

1. How to approach patients with chronic liver disease
 - a. Describe key questions to ask a patient with chronic liver disease when taking a medical history
 - b. Identify pertinent physical exam findings in patients with cirrhosis
2. Liver anatomy and physiology
 - a. Describe key physiological processes conducted by the liver
 - b. Recall liver anatomy, both on a microscopic level and on an organ-level
3. Elevated liver enzymes
 - a. Identify hepatic and non-hepatic sources of aminotransferases
 - b. Interpret patterns of elevated liver enzymes to develop a differential diagnosis

Bloom Taxonomy Applications/Number of Multiple-Choice Questions

	Knowledge	Comprehension	Application	Total	Percentage
How to Approach Patients with Chronic Liver Disease	3		2	5	30%
Liver anatomy and physiology	4	2	1	7	40%
Elevated liver enzymes		3	5	8	30%
Total MCQ	7	6	7	20	
Percentage	35%	30%	35%		100%

Each of the MCQ questions would be worth 1 point.

Short-Answer questions

The six short-answer questions would be worth 5 points each. They would combine elements from all three key content topics above and the above three Bloom taxonomy domains.

Points Allocation: MCQ (25) + Short Answer (30) questions = 50 points total for the examination.
