

SAMR Model Worksheet

Complete the 2 SAMR tables (following the example) with 1 student assessment and 1 content delivery topic (how you will deliver the topic using technology) based on each SAMR level.

EXAMPLE SAMR TABLE	
Original Student Assignment/Activity: The student creates a 6-page book on (topic goes here) using pencil, paper, and crayons.	
SAMR Level	Assessment/Activity Description
Substitution involves doing the same thing you would do without technology and does not modify the task beyond the use of technology substitution.	The students will use Google Docs to type their story text. Each page will be printed with text allowing the students to draw correlating images.
Augmentation involves some functional improvement but is still a substitution. The task is still the same, but the technology functions add some additional improvement.	The students will add images from an internet search that correlate with their text to complete their book in Google Slides.
Modification using technology allows for significant task redesign. The outcome will be the same, but it has been enhanced the product (assessment/activity) has changed.	The students will use screen-cast-omatic and narrate their slides in their voices.
Redefinition using technology allows for the creation of new tasks that were previously inconceivable without technology.	The students will use book creator to create an eBook to share with classmates and parents.

Assignment: Complete the 2 SAMR tables below.

SAMR Table #1 (1 point) Your Assignment or Content/Topic being taught (does NOT use any technology): Student Assessment – <u>Proposed diagnostic/therapeutic management for differential diagnosis.</u> <u>Status quo:</u> Students conduct an informal live verbal presentation to the attending physician and medical team of their differential diagnosis and proposed diagnostic/therapeutic management.	
SAMR Level	Assessment/Activity Description
Substitution involves doing the same thing you would do without technology (but with technology) and does not modify the task	The students will utilize Microsoft Word to type their proposed medical workup based on differential diagnosis using a short-answer format.

beyond the use of technology substitution. (1 point)	
Augmentation involves some functional improvement but is still a substitution. The task is still the same, but the technology functions add some additional improvement. (1 point)	The students will utilize Microsoft Powerpoint as a presentation tool (incorporating 'Cameo' feature for video integration) to present their proposed medical workup based on differential diagnosis.
Modification using technology allows for significant task redesign. The outcome will be the same, but it has been enhanced the product (assessment/activity) has changed. (1 point)	The students will post their PowerPoint presentations to Canvas through a discussion board for peer learning.
Redefinition using technology allows for the creation of new tasks that were previously inconceivable without technology. (1 point)	The students will use Mindmap to create a mind map to share with other trainees on rotation and with the attending to present their proposed diagnostic/therapeutic management.

SAMR Table #2 (1 point) Your Assignment or Content/Topic being taught (does NOT use any technology): <u>How to take a Medical History</u> (Content Delivery Topic) In-person live verbal presentation (without slides or technology) by attending physician to students of key components of a medical history with added pertinence to liver disease.	
SAMR Level	Assessment/Activity Description
Substitution involves doing the same thing you would do without technology (but with technology) and does not modify the task beyond the use of the technology substitution. (1 point)	The instructor will utilize voice-over PowerPoint with static text to describe how to take a medical history.
Augmentation involves some functional improvement but is still a substitution. The task is still the same, but the technology functions add some additional improvement. (1 point)	The instructor will utilize Prezi to create an engaging presentation incorporating hyperlinks to referenced documents.

Modification using technology allows for significant task redesign. The outcome will be the same, but it has been enhanced the product (assessment/activity) has changed. (1 point)	The instructor will create a Wiki page with links and additional pages detailing each of the elements of a medical history, incorporating audio/video examples, links to referenced resources.
Redefinition using technology allows for the creation of new tasks that were previously inconceivable without technology. (1 point)	The instructor will utilize Powtoon to create an engaging presentation including animations and audio-visual elements of history examples to be shared with students and trainees.
